

ReBound ReCycle Inc. is a one of a kind retrieval service for foam underlay recyclable materials.

Never before have Alberta Floor Covering Companies been able to effectively reduce their waste management costs AND save the Environment at the same time. What started in Calgary is NOW expanding to include other towns and cities in Alberta.

ReBound ReCycle Inc. initiated a one of a kind retrieval and recycling program for all foam underlayment products in Calgary. This new retrieval service is a business with enormous potential and a growing list of customers. The service itself costs carpet installation companies very little or nothing to put in place and maintain. This unique diversion program for foam products is accessible and affordable to participate in, and is great for the environment.

Robert Kaemingh took over the reins of the company in June 2011 from Bobby-Jo Carswell, who started ReBound ReCycle Inc, in 2010. Bobby-Jo's vision was to help Calgary become a healthier, cleaner and more environmentally friendly city to live in.

Providing a retrieval recycling programs for foam underlay products in Calgary will help local landfills which are already overflowing with waste. It would also help other businesses reduce their costs keeping their Recyclable products out of the dump and saving Dump Fee's. ReBound ReCycle has quickly gained support and recognition throughout Calgary.

Building eco-friendly routes and promoting the benefits of recycling help to provide a benefit to our environment. "Forward Movement with Impact" says that we are all doing our part to help save the planet. This is the mandate that the company practices daily and will continue to practice in the future.
